Title: *An Application of Gaussian Convexity for Logarithmic Moment Generating Functions in Spin Glass*

Advised by Longmin Wang @ Department of Statistics, Nankai University

-Generalized a quantitative bound for the Dotsenko-Franz-Mézard conjecture, the SK model case, to p -spin models with even p . Also applied Gaussian interpolation argument to prove the differentiability of the limiting logarithmic anneal partition function of λ -replica for the p -spin models with even p (In Chinese, access upon request).
